

REAL-WORLD DETERRENCE UP TO 500 FEET

AI DETECTION MEETS REAL-WORLD DETERRENCE

Action-CS and Evolon are partnering to bring AI-verified deterrence to modern security systems.

By combining Evolon's advanced video analytics with Action-CS Active Deterrence Units, businesses can detect threats earlier, verify them intelligently, and stop incidents before they escalate.

Why This Partnership Matters

Traditional security often struggles with two major challenges:

- False alarms that drain time and resources
- Reactive responses that capture crime after the fact instead of preventing it

By combining Action-CS Active Deterrence Units (ADUs) with Evolon's advanced analytics, we deliver a solution that detects earlier, verifies smarter, and deters faster.

How It Works

- Detection – Evolon's AI-powered video analytics analyze existing camera feeds to identify suspicious activity like **loitering** or **intrusion**, while Action-CS ADUs deliver up to **500 feet** of onsite deterrence with flexible mounting and **180°, 270°, or 360° coverage**.
- Verification – Evolon Verify filters out up to **98.5% of false alarms**, ensuring operators focus only on real threats.
- Deterrence – When action is needed, operators use Action-CS ADUs to issue **live talk-downs**, trigger tiered audio **escalation**, and activate **multi-color strobes** to stop intruders in their tracks.

This seamless workflow transforms security from reactive to proactive.

Benefits for Businesses & Partners

- Stronger Protection: Covers large areas like parking lots, retail centers, and construction sites
- Reduced Costs: Up to **75% savings** over guards and up to **50% savings** over trailer-based security solutions
- Faster Response: Verified alerts drive priority police response under AVS-01 standards
- Easy Integration: Action-CS's patented, IP-protected single-cable PoE design works with any camera, VMS, or monitoring platform

Smarter Security, Together

The Action-CS + Evolon partnership delivers more than technology – it delivers peace of mind. Whether you are an integrator, security provider, or business owner, this solution gives you the tools to protect smarter, respond faster, and eliminate wasted effort on false alarms.
